

TESTIMONIALS

The Ausable Bayfield Conservation Authority (ABCA) appreciates this opportunity to collaborate with partners to offer this unique job experience to a young environmental professional. The Stewardship Specialist will help improve the conservation of natural areas by identifying species and potential threats on ABCA lands and will work with the community to attempt to improve specific awareness and stewardship of landowners and conservation land users. The assistance with the wages and associated expenses has made this position and project possible.

Kate Monk, Stewardship and Conservation Lands Supervisor, ABCA

The University of Waterloo and Carolinian Canada provided ACER with outstanding support to employ an intern. Through an impressively smooth application process, we interviewed nine applicants. It was great to see so many interested in getting some environmental experience in forest biodiversity.

Alice Casselman, President, ACER

The co-op program at NCC was extremely important for me as a student to gain experience and develop my writing, presentation and interpersonal skills. I learned a lot about alvar communities and the complexity of making decisions with both the environmental and social aspects in mind. This document provides resources to NCC to facilitate stewardship and restoration work.

Alex Hood, Intern, NCC

The co-op program has been useful to NCC in terms of providing human resources both to conduct research and to help with general day to day stewardship activities.

Heather Arnold, Program Manager, NCC

As you can see, we are quite enthusiastic about this candidate and look forward to Lauren continuing her valuable work at rare Charitable Research Reserve, not only for the benefits it provides for the land and the charity, but also for the experience it provides to this talented young student.

Christine Rier, Community Relations, rare
